# CLEARANCE SALE!

## WE ARE DISCONTINUING A SELECTION OF VELUX FLASHINGS

- VELUX flashings provide a weathertight finish around the window.
- They are compatible with virtually any type of roofing material, from slate and tiles to corrugated sheeting and even thatch.
- Flashings are designed to sit under the roofing materials - The water from the roof then collects in the built-in guttering system.
- The gutter overlaps a second section of the flashing to help the water flow smoothly down the side of the window.

## EDL Slate Flashings

- Install the brackets at the top and bottom of the frame at the red line level, for standard installation heights.
- Flashings for one roof window being installed into slate up to 8mm thick.
- Not suitable for interlocking slate.
- Suitable for Roof pitch between 15° and 90°.
